Supported File Types

Product Sheet

Votiro Cloud: Supported File Types

The File Types table lists the file types and attributes supported by Votiro Cloud. The information is arranged according to the categories that appear in the Action by File Type area of the Policies page in the Votiro Management Dashboard.

- Types marked with λ are scanned by the Positive Selection® Engine and their true file type is verified based on their structure. The files are not modified by this process.
- Types marked with ** are obsolete. They are not recommended as filters in a production environment. Support for these types might be discontinued in a later version.

To view the most up-to-date list of file types and attributes, log into our **Support Portal** and navigate to [File Types Table](#).
